Course Number: U5WM102G

Duration: 1 days

Overview

Course Description

This 1-day course focuses on configuration management for the development of software or hardware systems. You will learn to utilize IBM Engineering Workflow Management to effectively collaborate and share work with your team using Jazz configuration management, to create and reproduce configurations, perform code reviews, and explore changes.

- This course also applies to IBM Rational Team Concert 6 (RTC) users.

Skills Gained

After completing this course, participants should be able to:

- Explain the key concepts and terminology
- Manage work items
- Commit changes via configuration management

- Understand a hierarchy of streams and components
- Perform merges, resolve, and avoid conflicts
- Create and compare baselines
- Use change history at multiple levels
- Understand integration mechanisms
- Discuss the user interfaces and relate them to own needs

Who Can Benefit

This introductory course is for:

- Software Developers
- System Engineers
- Technical Testers

Prerequisites

One should have experience with the following:

- Eclipse or a similar IDE

Lab Environment

- Based on IBM Engineering Workflow Management 7

Audience

Course Details

Topics

- About this course
- Key concepts and terminology
- Product overview
- Managing work items
- Committing changes
- Sharing changes with team
- Locks, reverting and import
- Baselines and snapshots
- History
- Integrations
- User interfaces
